

# Cybersecurity Assessment

The first cyberrisk analysis of your information system

Contact us: [contact@almond.consulting](mailto:contact@almond.consulting)

We consider that the **security assessment** must fit the **challenges** of your IT security based on **your organization activities**.

An simple approach to meet the following challenges:

- > What are your essential IT assets?
- > What risks level for your core business?
- > Are your IT assets sufficiently protected against current attacks?
- > What actions should you take as a priority?
- > How to use cyber risks in IT decisions ?

## Our offer

### Identify the challenges

- > Understand your business, your services, activities, etc. to **identify the information Systems tools** that are essential to your organization's processes.
- > Assess and **evaluate the security needs** of your Information Systems in relation to your business challenges.
- > Identify security incidents that already occurred and consider remediation costs.

### Analyze the risks

- > **Mapping the main security risks** for information Systems core elements against 3 security criteria: Confidentiality, Integrity and Availability.
- > **Assess** risk level based on active security controls and upcoming ones.
- > **Identify security actions** to act on the most important risks.

### Advise

- > **Share our outcomes** and allow you to understand the cybersecurity issues.
- > Establish and share a **pragmatic action plan** that can be quickly implemented.
- > Formalize everything in a **diagnostic report** allowing you to keep a comparable reference trace.

## The benefits

1

One vision of your cybersecurity risks

2

One risk-based steering tool

3

One action plan based on your security risks

## Our value proposition

A pragmatic and operational IS security based on relevant standards

Our expertise to initiate your cybersecurity

Our support to follow-up your action plan
