

Industrial information systems security audits

Security risks analysis related to your industrial information system

Contact us: contact@almond.consulting

An approach to give you a global vision on the maturity level of your industrial systems' security.

An analytical approach to respond to the following issues:

- > Systems designed without taking into account good security practices.
- > Physically extended and isolated systems.
- > Growing and uncontrolled interconnections.
- > Maintenance in difficult security conditions with significant supplier constraints.

Our offer

Identify

- > **Identify** your information system as a whole to determine the tools that are essential to your organization's processes.
- > **Evaluate and enhance** the security needs of your industrial systems in relation to your challenges.

Analyse

- > Define the risks for the critical elements of your industrial IS based on three security criteria: **availability, confidentiality and integrity**.
- > Assess the risk level based on the **measures** already in place and upcoming measures.

Advice

- > Share our findings and define an **action plan** adapted to your context.
- > Establish and share a pragmatic and operational action plan.
- > **Support**, if necessary, the implementation of the action plan.

The benefits

1

A precise inventory of the risks weighing on your industrial assets

2

Prioritization of security actions adapted to your challenges

3

An improvement in your level of cyber maturity

Our value proposition

Pragmatic and operational industrial IS security based on relevant standards

Our expertise to start your industrial cybersecurity

Save time thanks to the recommendations produced by our experts
