

Microsoft 365 Security Assessment

Contact us: contact@almond.consulting

Microsoft 365 : a rich and complex offer

The Microsoft 365 suite of collaborative tools is part of a complex ecosystem, functionally very rich and whose **security level** is difficult to **control perfectly**.

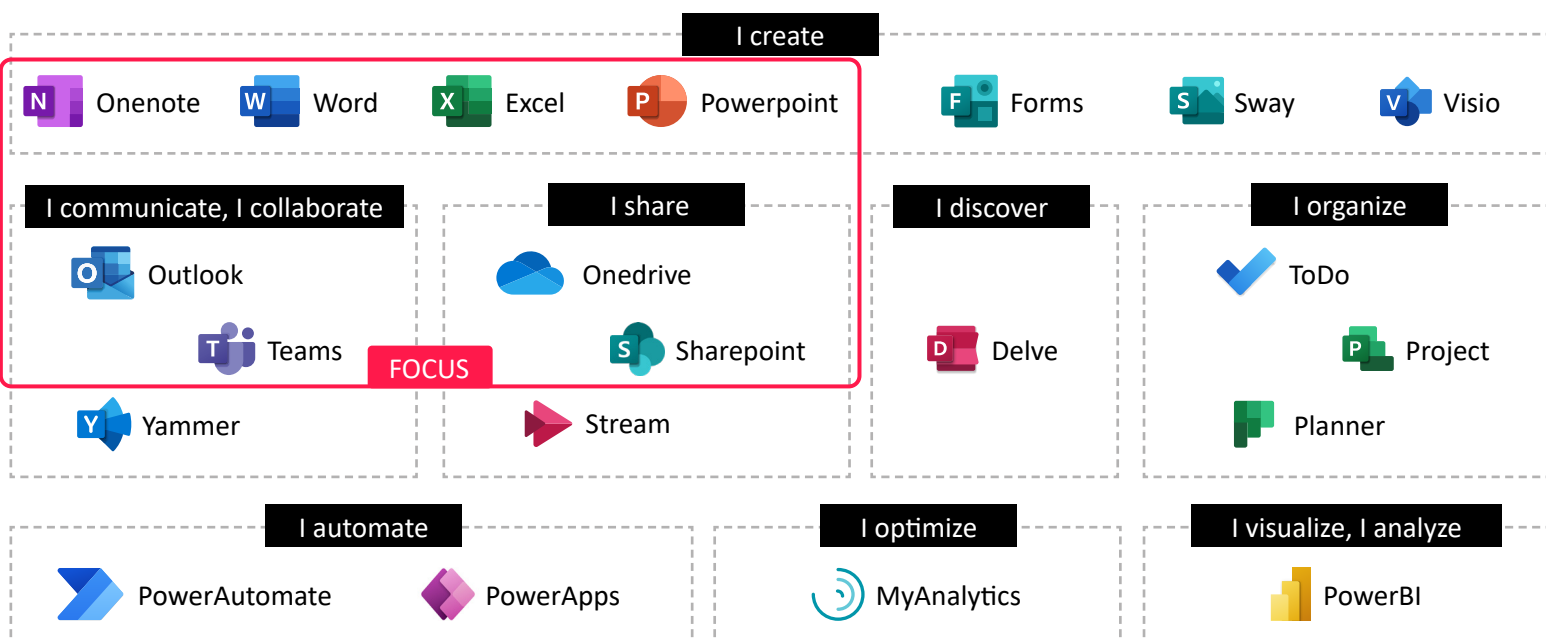

Securing your Microsoft 365 tenant : why start with an audit?

Whether it is **following a migration or after several years of use**, strengthening the security of **Microsoft 365 tools** requires a phase of analysis of the company's uses, completed by an exhaustive review of the configurations.

A technical configuration audit focusing on security will enable you to identify your **strengths and areas for improvement** to protect against various threats, such as identity theft or phishing.

What is the scope of the audit?

Microsoft 365 Security Assessment

Why choose us to support you?

Almond's *Infrastructure Security* team has **complete expertise** in the service chain offered by Microsoft.

Thanks to the development of a list of **170 control points** integrating the ORCA tool endorsed by Microsoft, the audit proposed by Almond is complete, pragmatic and accessible. Almond offers a **customized approach** that includes a meeting with the IT administration team to understand **your company's specific practices and challenges**.

The audit deliverables are directly usable by your teams to initiate remediation actions that will ensure an appropriate level of security.

What is our audit process?
